

3.2V (1S) Lifepo4 cell balancing board

Model: PCM-B01S20-417 (A-1) (1S)

NO.	Test Item		Criterion
1	Voltage	open voltage for cell balancing (working voltage)	$\geq 3.60 \pm 0.03V$
		open voltage of detection delay time	0.96S—1.4S
2	Current	balancing current for single cell	$1.40A \pm 0.1A$

Remark: because of the high balancing current, it's better to take the wire above 18# for connection.
